- All code should meet the acceptance criteria defined for each task.
- All code should have appropriate JavaDoc and comments explaining its purpose and give basic information like who wrote it, what it uses and who uses it.
- All of the code must be tested.
- Trello system must be followed. I.e. move the card to "done" last!
- All code should follow MVVM design patterns.
- All code and comments must be written in english.
- All code should follow basic java best practices.
- We use Git to handle version control of our code
- All commits should be in english.
- Own branch should be created.
- When a feature is about to be merged with master it should be done using a pull request instead of a standard merge.
