LP4LV2

Jakob:
What do I want to learn and understand better?
I want to better learn how to do a professional design of an app so that it actually looks decent. Last time when I did a project(an application) there were a lot of unfinished parts, some not properly designed and others not fully functional. I hope that with the utilization of scrum we can better accomplish the project goals. In order for the agile process to work better I also have to start learning more about the planning process for each sprint.

How can I help someone else, or the entire team, to learn something new?By being open and friendly I can help nurture a culture where everyone can ask for feedback and also provides positive feedback. By having an open communication channel as a team we are all helping each other and can complement our weaknesses as a team.

What is my contribution towards the team's application of scrum?
Not sure yet since we have not fully started with the scrum technique. We are still knee deep in the planning phase and now finally moving forward towards the weekly sprints with the utilization of scrum.

What is my contribution towards the team's deliveries?
I have tried to be as active as possible during team meetings. Some things we have accomplished are: We decided on a project by popular vote where everyone provided the team with their opinions. We as a team created a business canvas where I mostly helped format the wording and also provide some ideas. We have created a mockup which I had more experience of from before compared to the business canvas. When creating the mockup I helped identify unnecessary buttons etc while also creating some views by myself.

Oussama:
What do I want to learn and understand better?
I want to develop my understanding about how better User Stories should be, and to develop
my understanding of Scrum in general.

How can I help someone else, or the entire team, to learn something new?
We have decided to develop an android app that I feel comfortable with since I worked a little bit with android before. I feel more active this time that I can participate more in the work in general. This week I tried to share my knowledge and helped to create mockups as well as creating some user stories.
What is my contribution towards the team's application of scrum?
During this week, compared with my previous knowledge that was not so wide when it came to creating a good User Story, I've developed my experience understanding how to create a User Story and how to mockup, as well how the connection between activities should work.

What is my contribution towards the team's deliveries?
As a team, We provided some ideas for the app and voted for one, and worked with the mockup of the whole app. I've participated with the team in creating some of the user stories, creating mockups and in the discussion of the business canvas model which I had no experience with before.

Gabriel:

What do I want to learn and understand better?

I want to develop my understanding of Scrum and how to successfully use it in our group project. Furthermore, I still want to learn how to design an app. We are going to use android studio to do this, which I look forward to using and learning more about.

How can I help someone else, or the entire team, to learn something new?

The students from Industrial Engineering and Management (me included) had some previous knowledge of Business Model Canvas, which we have used in other courses. Even though this is not a complicated thing, I briefly and effectively tried to communicate to the other students what this was and how to use it.

What is my contribution towards the team's application of scrum?

We have started using a Scrum board on a website called trello.com. All of us collaborated to discuss user stories etc. to get started with Scrum. We have not come a lot further than this in using Scrum yet.

What is my contribution towards the team's deliveries?

This week we have decided what project idea we would like to work on in this course. Furthermore, we have done a mockup design of the application, worked on a business model canvas, and started using a scrum board. In all the things we have done this week I have actively participated and contributed.

Alex:
What do I want to learn or understand better?
Currently we are working on the mockup design and the business model. I want to learn better how to effectivly work in Miro in which we have done our mockup design and I want to learn more about app-development in android studio which is the program we are going to use in the future when developing the app.

How can I help someone else, or the entire team, to learn something new?
During the week we have been working on a business model canvas, which I have used in previous courses. Not everyone in my group was familiar with it and therefore I have helped the team to understand and work with the business model canvas better.
What is my contribution towards the team's use of Scrum?
We have not applied the scrum framework fully yet but we have set up a plan for working in it using trello.
What is my contribution towards the team's deliveries?
I have actively participated in the discussions we have had about user stories and business canvas model during the week. I have also contributed towards finishing the mockup design.

Jennie
What do I want to learn or understand better?
We have decided to create an Android app, which I haven't done before, therefore I want to learn and get more comfortable with Android Studio. This week we have been working with the business model canvas, which I wasn't familiar with before, thus I want to improve my understanding of different terms.

How can I help someone else, or the entire team, to learn something new?
This week we have also worked with the mockup design, which I felt more comfortable doing in comparison to the business model canvas. I found this online collaboration tool for creating

mockups, which I shared with the others. We are a few students in the group from IT, and we shared our knowledge of creating mockups with the student from I, and the students from I had experience from working with the business model canvas that they shared with us.

What is my contribution towards the team's application of scrum?
After attending this week's lectures, I have gained a better understanding regarding scrum. With the knowledge that I have developed and my previous experience from working with sprints, I believe that I can help the team apply scrum in our project.

What is my contribution towards the team's deliveries?
This week, the focus was to work on the project scope. I have participated in the voting of the idea for the project and actively contributed with my participation. Furthermore, I have also shared my thoughts in our discussions concerning the project.

Arsenije:
What do I want to learn or understand better?
The project that we are working on is an app, and the team decided that we will make an android app. So, this week and the coming weeks my aim is to learn to code in Android Studio so that I can contribute with some coding.

How can I help someone else, or the entire team, to learn something new?
When developing the Business Model Canvas, the whole team sat together to discuss how to put it together. We all contributed with discussion and reflection on the different factors that will influence the app and how the app will influence different stakeholders. I think that my knowledge in business modeling came to some use this week because I helped with developing the Business Model Canvas.

What is my contribution towards the team's use of Scrum?
I proposed that we have daily meetings over Zoom, so that the whole team knows what everyone is working on and to ask for help. I think that these meetings will benefit the team in the sense that one can ask for help when needed, but also so that everyone can take responsibility so that the project is going in the right trajectory.

What is my contribution towards the team's deliveries?
My contribution to the team's deliveries is the preparation of the Business Model Canvas and I also helped a little with the 'user stories' on the team scrum board.

Johan:
What do I want to learn and understand better?

During the week I have learned a bit more about how one should work with scrum, but I still feel that I have a lot more to learn about the time management and planning part of scrum.

How can I help someone else, or the entire team, to learn something new?

My way of thinking regarding this point has not changes since last week. However, I have reflected on what I could teach the group to help us with the project. Since I have already worked with both android app development and version control using GitHub, I believe that will be able to teach theses skills to the group members have not worked with them yet.

What is my contribution towards the team's application of scrum?

This week my contribution towards the team's application of scrum has been to create a scrum board in *Trello* that will contain our product and sprint backlog. Beyond this we have not really worked with scrum since we have not hade our first sprint yet.

What is my contribution towards the team's deliveries?

This week my contribution towards the team's deliver has been working with the mockup and figuring out what features out application should have. I also had to merge together the images from out mockup into a single image since the tool that we choose to did not allow us to export a high res image of the mockup without a premium account so we had to take several images and then merge them into one.
